

## African Elephant (*Loxodonta africana*)

**Habitat:** Elephants can live in nearly any habitat with enough food and water to survive.

**Size:** The largest land mammal on Earth, the African Elephant can weigh more than 6 tons, and its trunk alone can reach 7 feet long!

**Prey:** Elephants spend about 16 hours each day eating—mainly grass, leaves, twigs, bark and fruit.

**Did You Know?** An elephant's trunk has many functions—it's used to smell, to suck in water and pick up food, to make loud warning noises if threatened and even to hug other elephants!
