

Anteater

(*Myrmecophaga tridactyla*)

Habitat: Central and South American rainforests and swamps.

Size: Six to eight feet long from the tip of its long snout to the end of its bushy tail.

Prey: The name says it all...ants! They also like termites and can eat 1,000 insects in just a few minutes.

Did You Know? An anteater has an extra long tongue (the size of two rulers next to each other!) that it flicks in and out of its small mouth about 150 times per minute.
