

Gorilla (Gorilla gorilla)

Habitat: Among the trees in western and central African rain forests.

Size: They enter the world weighing only 4 pounds (smaller than most human babies), and grow to be more than 350 pounds!

Prey: Adult male gorillas eat about 70 pounds of food per day. But they don't eat meat, so that's a lot of leaves, vegetables, fruits, and berries!

Did You Know? Gorillas laugh when they are tickled and cry (with sounds, not tears) when they are hurt.
