

King Cobra (*Ohiohagus hannah*)

Habitat: Cobras prefer rainy, humid climates and are often found in rainforests or near rivers and swampy areas.

Size: King Cobras are the largest venomous snake in the world and can grow to nearly 20 feet long.

Prey: Birds, fish, frogs, toads, lizards, small mammals such as rabbits and rats and even other snakes.

Did You Know? Cobras don't have to bite their prey to infect them. They're the only snake that can spit their venom too!
