

## KILLER WHALE (Orca *Slulrius*)

**Habitat:** Where does an animal with no predators live? Anywhere it wants! Killer whales live in every ocean, but they're most often found in waters where marine life is plentiful, such as the Arctic and Antarctic.

**Size:** Some adult males are nearly 30 feet long (that's the length of two cars placed end to end!)

**Prey:** Harbor seals, sea lions, elephant seals, whales, porpoises, sea birds and schooling fish.

**Did You Know?** Killer whales are the largest member of the dolphin family. A killer whale can hold its breath up to 15 minutes (don't try that yourself!)

MUTUAL of OMAHA'S
