

## Red Panda (Ailurus fulgens)

**Habitat:** Cold, high altitude, mountain forests.

**Size:** Much smaller than a giant panda, it actually resembles a raccoon in both size and appearance.

**Prey:** The red panda lives primarily on bamboo—in fact, it can eat 200,000 leaves per day!

**Did You Know?** Like the giant panda, the red panda has an extra thumb, which is really just an enlarged bone, to help it grip thin branches and leaves in its paws.
