

Wolf (Canis lupus)

Habitat: Wolves usually live away from humans, in places like large national parks or wilderness areas. They are most often found in North America and northern Europe.

Size: Largest member of the canine family, the same family that dogs are part of. Male wolves are bigger than females and average five to six feet from nose to tail.

Prey: Large animals with hooves, such as deer, sheep, and goats.

Did You Know? Wolves travel in organized groups of 6-8 members called packs and communicate with one another through facial expressions, body language, and howling.
